

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	11 July 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	4 Marks

Brainstorming helped the team identify meaningful analytical ideas using the Heart_new2 dataset. Ideas were grouped, evaluated for feasibility and prioritized to build an effective Tableau Dashboard and Story.

Problem Statement

How might we analyze heart disease risk factors using the Heart_new2 dataset so that doctors and hospital administrators can identify high-risk patients and support evidence-based healthcare decisions?

Step 2: Individual Idea Listing

Data Preparation	Risk Analysis	Visualization	Deployment
Import Heart_new2 dataset	Analyze age categories	Create KPI dashboard	Develop Flask website
Clean missing values	Analyze BMI trends	Create Tableau Story	Publish on Tableau Public
Remove duplicate records	Smoking vs Heart Disease	Add interactive filters	Maintain GitHub repository
Validate data types	Diabetes & Stroke analysis	Heat maps and charts	Responsive mobile interface
Create calculated fields	General Health analysis	Risk factor dashboards	Project documentation

Idea Prioritization Summary

Priority	Activities
Do First	Data cleaning, preprocessing, KPI dashboard, age, BMI, smoking and diabetes analysis.
Plan Next	Predictive heart disease modelling and advanced analytics.

Fill-in Tasks	Tableau Story, Flask deployment and GitHub documentation.
Reconsider	Integration of additional healthcare datasets and wearable-device data.
