

Ideation Phase

Empathize & Discover

Date: 10 July 2026

Project Name: Heart Disease Analysis (Heart_new2 Dataset)

Maximum Marks: 4 Marks

Our Empathy Map Canvas: Heart Disease Analysis User

Primary user persona: A cardiologist, hospital administrator, or healthcare analyst who uses patient data to identify heart disease risk factors and improve treatment decisions.

THINKS

- Which patients are at the highest risk of heart disease?
- Which lifestyle and medical factors contribute the most?
- Can early prediction reduce severe heart complications?
- How can patient outcomes be improved?

SEES

- Thousands of patient records in the Heart_new2 dataset.
- Different age groups, BMI values, smoking habits, diabetes, stroke history, and general health conditions.
- Increasing demand for data-driven healthcare decisions.

SAYS

- 'I need an easy way to identify high-risk patients.'
- 'Interactive dashboards will help me understand disease patterns.'
- 'Early detection can improve patient care.'

DOES

- Reviews patient records.
- Uses Tableau dashboards to analyze trends.
- Compares risk factors such as BMI, Smoking, Diabetes, Physical Activity, Kidney Disease, and Age.
- Supports preventive healthcare planning.

PAINS

- Large healthcare datasets are difficult to analyze manually.
- Hidden patterns are difficult to identify.
- Delayed diagnosis may affect patient outcomes.

GAINS

- Early identification of high-risk patients.
- Better clinical decisions using interactive dashboards.
- Improved preventive healthcare and resource planning.

User Needs

- Interactive dashboards for Heart_new2 data.
- Accurate visualization of heart disease risk factors.
- Patient segmentation by age, gender, BMI, diabetes, smoking, and other health indicators.

Opportunities

- Build Tableau dashboards for heart disease analysis.
- Predict high-risk patient groups.
- Support hospitals with data-driven treatment and preventive healthcare strategies.
