

Cardiologist — Analytics Dashboard Journey

Project Overview

Project Title	Heart Disease Analysis
Repository	Heart-Disease-Analysis
Website	Flask web application with embedded Tableau Dashboard and Tableau Story
Project Description	Analyzes the Heart_new2 dataset to identify heart disease risk factors and provide

Dashboard Modules

- KPI Dashboard
- Heart Disease Distribution
- Age Category Analysis
- Gender Analysis
- BMI Analysis
- Smoking Analysis
- Diabetes Analysis
- Physical Activity Analysis
- General Health Analysis
- Stroke & Kidney Disease Analysis
- Interactive Filters

Customer Persona

Primary User	Cardiologist / Hospital Administrator
Age	30–55 years
Occupation	Cardiologist / Healthcare Data Analyst
Experience	Uses healthcare analytics to identify high-risk patients and improve treatment decisions

Goals

- Identify high-risk patients.
- Monitor health indicators.
- Analyze BMI, Smoking, Diabetes, Stroke, Physical Activity and Age.
- Support preventive healthcare.
- Make evidence-based clinical decisions.

Challenges

- Large healthcare datasets.
- Manual analysis is time-consuming.
- Difficult to identify disease patterns.
- Limited visualization of patient risk factors.

Customer Journey Map – Dashboard Analytics Journey (Five Stages)

1. Access Dashboard

Experience: Open the Heart Disease dashboard to review KPIs.

Goal: Quick overview of patient statistics.

Opportunity: Add a 'Start Here' guide.

2. Review KPIs

Experience: Review total patients, heart disease cases, BMI and smoking rate.

Goal: Understand overall health status.

Opportunity: Add benchmark values.

3. Analyze Risk Factors

Experience: Filter by Age, BMI, Smoking, Diabetes, Stroke and Physical Activity.

Goal: Identify high-risk groups.

Opportunity: Provide smart default filters.

4. Review Story

Experience: Walk through Tableau Story to understand insights.

Goal: Recognize disease trends.

Opportunity: Refresh dashboards regularly.

5. Make Decisions

Experience: Use insights for treatment and preventive healthcare.

Goal: Improve patient care.

Opportunity: Export actionable reports.
